Skills

Before starting my Computer Science degree, have i been programming for about five years. My interest began with game development in Python, where i implemented a simple AI-systems. This lead me to dive deeper into software development. In high school i had informatics, where i learned the basics of frontend development(HTML, CSS, Javascript). These experiences gave me practical skills and a foundation for further development within software. Since starting my Computer Science degree, have I developed an interest for computer architecture and servers.
